SUMMARY

Software Engineer with 3+ years of experience across commercial software and mobile games development. Enjoy solving technical problems, improving systems, and creating clean, maintainable solutions that support both product quality and long-term development.

EXPERIENCE

Freelance

2019 - 2021

- *Web & Backend Automation: Built 10+ custom backend services and tools using Python to automate manual operations for businesses.*
- *API Integrations: Developed Telegram and Discord buissness bots via Python.*
- *Algorithmic Logic: Analyzed and resolved complex computer science and mathematical problems.*

EUROPRAVO LLC. Ukraine, Kiev (Hybrid)

Jan 2021 – Sep 2023

C# Developer / .NET Developer (Legal Firm)

- **Optimized database performance:** Reduced query response times by approximately 25% by redesigning relational database schemas and indexing methods for client tracking.
- **Automated core workflows:** Cut down document and report generation time by an estimated 35% by developing a custom, template-driven C#/.NET engine.
- **Improved system reliability:** Increased internal case management system uptime to over 99% by systematically refactoring legacy code and resolving critical bugs.
- **Executed seamless API integrations:** Connected 3 essential third-party services (including state registries) with internal tools by building stable RESTful integration layers.
- **Enhanced data protection:** Achieved compliant and breach-free data handling of confidential legal records by implementing strict role-based access control (RBAC) mechanisms.

VicVent Studios. Ukraine, Kiev (Remote)

Mar 2024 – Aug 2024

Gameplay Unity developer / Tool developer

- **Internal Tools Engineering:** Designed and prototyped custom development utilities and editor tools, accelerating subsequent feature deployment cycles by roughly 50%.
- **Rapid Systems Prototyping:** Engineered 4 distinct software prototypes to validate technical and production feasibility, achieved by implementing modular core mechanics and scalable user-input logic.
- **Architecture & Code Reusability:** Increased system components modularity by programming advanced AI behaviors (decision trees) and leveraging clean design patterns.

Roamer Games. Germany, Berlin (Hybrid)

Oct 2024 – May 2026

Gameplay & Systems Unity Engineer / Cloud Software Engineer

- **Cloud Infrastructure & Backend Engineering:** Scaled and maintained secure cloud-based microservices for over 100,000 active users by leveraging AWS serverless architecture.
- **Live Systems Optimization:** Ensured seamless operations, data sync, and ongoing live updates for 2 high-traffic production platforms by implementing proactive monitoring and robust backend logic.
- **Internal Tooling & Automation:** Accelerated system configuration and internal content iteration cycles by an estimated 35% by designing and developing custom administrative tools.
- **End-to-End Release Management:** Successfully deployed and shipped 5 major software applications to production through agile development practices and rigorous integration testing.
- **Maximized User Retention & Engagement:** Boosted long-term platform interaction by approximately 25% by architecting a secure in-game social network alongside real-time user-to-user communication modules.

- **Contributions to Steam Releases (Dice Gambit, Floss):** Actively participated in technical QA and usability testing. Evaluated system performance, identified critical software bugs, and proposed actionable architectural and gameplay system improvements to ensure a polished final product.

EDUCATION

Small Computer Academy "Step", Ukraine, Kiev

2021

Diploma in Computer Science, GPA (10.1 | Very good)

Focused on hands-on development of mobile applications and robotic software, including automation logic and algorithmic problem solving.

University of Europe for Applied Sciences. Germany, Potsdam

2025

Bachelor of Software Engineering, GPA (1,7 | Good)

Relevant course work: Real-Time Fluid Simulation: Algorithms, Optimization, and Application

SKILLS

- **Backend & .NET Ecosystem:** .NET/C#, MAUI, Blazor, WinForms, Integration testing, R3, SCI, MetaMask SDK.
- **Cloud Infrastructure (AWS):** Lambda, RDS, DynamoDB, S3, IAM, CloudWatch, Route53.
- **Databases & Tools:** PostgreSQL, SQL, Git.
- **Python & Automation:** FastAPI, Flask, SQLAlchemy, NumPy, PyTorch, BeautifulSoup, Bots (Discord/Telegram).
- **Programming Languages:** C#, Python, C++, HLSL.
- **Core Engineering Foundations:** Algorithms, Data Structures, Linear Algebra, Discrete Mathematics, Probability.
- **Game Engines & Simulation (Unity):** R3, Zenject, Netcode, Shader Graph, DOTs, Steam.Api (Facepunch) and other unity development tools.
- **Game Engines & Simulation (Unreal):** AI Perception System, Navigation, EQS, GAS, BPs, Animations/BlendSpaces, Multiplayer replication, AI (BTree).

LANGUAGES

- **Ukrainian:** Native (N)
- **Russian:** Native (N)
- **English:** Professional Working Proficiency (C1)
- **German:** Elementary Proficiency (A2) - Currently studying
